

Roger Ferreira

SOFTWARE DEVELOPER

I have been a developer for 1.5 years and am currently enrolled in a technical course in systems development, which covers both frontend and backend, providing knowledge on various fullstack programming concepts.

So far, my projects have been done using the following technologies: Node.js, JavaScript, TypeScript, Java, MySQL, SQL Server.

Languages:

English: B2 - Upper Intermediate

Spanish: A2 - Elementary

Portuguese: Native

Projects:

- User Management

([Project Link](#))

User management system with CRUD functionalities. It uses Node.js, Express, and MySQL on the backend, with bcrypt for password encryption, and frontend in HTML, CSS, and JavaScript that allows dynamic user management with real-time updates.

- Pokédex

([Project Link](#))

Interactive Pokédex developed with HTML, CSS, and JavaScript, consuming the PokéAPI to display Pokémon details such as name, number, type, weight, and height. It allows navigation via buttons or keyboard, search by name or number, and includes audio controls. The design is responsive and dynamic.
